

Extra tall mobile stand for large TV screens

Height adjustable up to 2,90 m. Max. Load: 150 Kg

Ref. **TORO A-101/C-TV**

Professional heavy-duty mobile stand designed to lift and hang large screens up to 150 kg. Our 2,9 m high tower makes a large TV display visible from across a room.

For a quick, safe and effortless lifting process, our screen tower is equipped with a hand winch with automatic braking system, which stops the TV screen at the desired height when the handle is released.

Our TORO A-101/C-TV mobile stand has a quick and easy installation with all necessary hardware included.

Thanks to its easy handling and sturdiness, this mobile screen stand can be considered as one of the most convenient and functional stands for large screens on the market. It is the perfect option for events, live performances, sports events, exhibitions, fairgrounds and occasions in general where we need to raise large TV screens.

LIFTING PROCESS: For a quick, safe and easy screen lifting process the TORO A-101/C-TV Stand is equipped with a hand winch with automatic braking system, which stops the screen at the desired height when handle is released. This winch is certified for a maximum load of 450 Kg. It comes with an adjustable adaptor (using aluminium clamps) to safely secure screens of up to 150 kg. Note: Different adaptor sizes made on request.

SAFETY MEASURES: TORO A-101/C-TV is equipped with three automatic safety systems to guarantee maximum reliability and strength in the lifting, hanging and lowering of the screen. This certified Lifting Tower for screens complies with current safety, quality, strength and welding standards for lifting heavy loads.

MAST SECTION: The Mobile Screen Stand is made with extruded aluminium profiles (Alloy: EN-AW 6082). These sturdy profiles are raised by means of pulleys with bearings and an anti-torsion galvanized steel cable.

BASE SECTION: Its reinforced, compact base has 2 double swivel castors with brakes (\varnothing 75 mm) and 2 rigid castors (\varnothing 200 mm) which facilitates moving the TORO A-101/C-TV stand around. Its reduced dimensions allow the screen to be easily moved from one room to another, through doorways and corridors. To make our mobile screen stand more stable it has articulated legs which have 2 positions.

The base is manufactured in sturdy steel and finished in a textured powder coating (Epoxy – suitable for outdoor use).

TRANSPORT: It comes with 6 heavy duty wheels to be transported both vertically and horizontally. To ease its horizontal transportation and the loading into vehicles, the TORO A-101/C-TV has two heavy-duty castors situated under the brake winch, which also protect the winch from being damaged.

SPECIFICATIONS	TORO A-101/C-TV
Maximum Height:	2.90 m
Maximum Load:	150 kg
Net Weight:	60 kg
Folded Dimensions:	45 x 56 x 1760 mm
